

DERMALOG

Finger Login

Login with fingerprint recognition:
Forget passwords and PINs!

Fields of application

- > PC, tablet and smartphone login
- > Login to apps
- > Authorization of online transaction
- > Multi-user login management
- > Time and attendance & access control

Key Benefits

No passwords, no PINs, no TANs – user-friendly and secure, “on the fly” identity verification in seconds with DERMALOG fingerprint recognition.

DERMALOG Finger Login

Login with passwords and PINs were yesterday's news - welcome the new DERMALOG Finger Login.

According to Verizon's latest Data Breach Investigations Report, 67% of IT security incidents worldwide are currently caused by stolen access data. With DERMALOG Finger Login, you can now easily and secure login onto your PC, laptop, tablet or smartphone – and even authorize transfers easily using fingerprint recognition. This completely eliminates the need to remember annoying PINs, TANs and passwords – thanks to the latest fingerprint recognition technology from the largest German biometrics manufacturer DERMALOG, logging in is now possible "on the fly".

A small fingerprint scanner integrated into a keyboard, computer mouse, tablet or smartphone is all you need to use the latest and extremely secure fingerprint recognition technology from DERMALOG. With an easy-to-use SDK, you can equip your IT system with the DERMALOG finger-login module. From now on, no more PINs, passwords or TANs are required – and you no longer need usernames, cards or tokens. DERMALOG's fingerprint recognition supports you in getting access to your daily applications fast and simple.

Thanks to our latest liveness detection, spoofing attacks can be identified unequivocally at login. This enables not only a secure login but also the fast authorization of on-line transactions. The system logs out automatically when the user is away from the device. Unintentional access by unauthorized persons can thus be successfully avoided. Multiple users can also access the system in parallel as long as they have been successfully registered for Finger Login beforehand.

Fits perfectly: TF1 fingerprint scanner

The TF1 offers fingerprint recognition in a whole new dimension. The device is not only extremely small and durable, but also easy to integrate. This makes it easier for various industries to get started with biometric identification.

With dimensions of only 41.3 x 27.3 x 7.3 mm, the TF1 is one of the smallest single-fingerprint scanners available. Nevertheless, the device meets all the necessary standards for reliable and safe use in the public and the private sector.

Our secure and user-friendly identification solution is made possible by our latest fingerprint algorithm. It allows the rapid extraction of biometrically relevant fingerprint data into a binary reference template. The template can be used indefinitely for subsequent verification.

With the Finger Login solution, DERMALOG provides a secure, fast and user-friendly method for identifying users. Complex and insecure passwords, PINs, TANs and cards are finally a thing of the past.

Main advantages:

- > **No need for usernames, passwords and PINs** – all you need is your finger
- > **No special operating system** – Finger Login runs on Windows and Linux as well as on Android and iOS
- > **No expensive hardware for liveness detection** – Finger Login does not require special scanners
- > **No permanently running system** – Finger Login automatically logs out when the user is away from the device
- > **Integrated “Wake-Up function”** – user-friendly verification of user activity

Fields of application

- > PC, tablet and smartphone login
- > Login to apps
- > Authorization of online transaction
- > Multi-user login management
- > Time and attendance & access control
