BIROFINGER

BIOMETRICS are becoming part of our daily live.

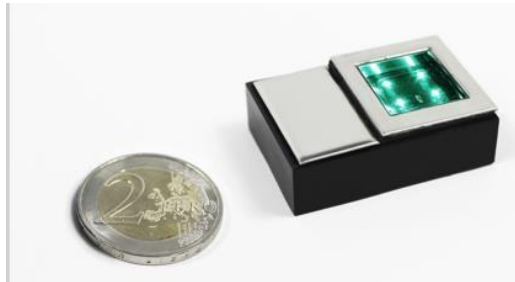

Biometrics like fingerprint are so much easier and more convenient than passwords. Everyone has their unique identity and we guarantee that your identity is safe and cannot be stolen or falsified. Fingerprint lock bases on living body fingerprint recognition technology which is the most advanced technology over the world. The capture area is a semiconductor sensor which made of elastic fine porcelain, which has the function of capturing the texture characteristic of fingerprint. When finger presses on it, the capturer collects the fingerprint after one scan.

Why Biometrics are good for your business?

We offer you solution to additional security of your employees and mobile property by using Fingerprint Scanner combined with Smart Card Reader.

This is the ideal solution for authentication systems based on smart cards. The DERMALOG ZF1 + Smart Card Reader fulfills all quality requirements by the FBI, ANSINIST, MINEX, ILO and numerous other standards. Once the fingerprint of the **card holder is captured and saved on the smart card**, he can easily identify himself as the legitimate owner by putting the card into the reader and his finger on the fingerprint scanner.

Due to the incorporated automatic fake fingerprint detection, the ZF1 + Smart Card Reader also provides best possible security.

Furthermore, the ZF1 + Smart Card Reader recognizes and captures dry and wet fingerprints flawlessly. Its design does not only make it extremely space-saving but also grants great ease of use and handling as **every person automatically places his finger on the scanner in the correct position**. The DERMALOG ZF1 + Smart Card Reader **supports all MCU-based cards** as well as all other popular memory cards in the market today. With the ZF1 + Smart Card Reader, DERMALOG combines a high-quality fingerprint scanner with a state-of-the-art smart card reader in one device - **your best choice at the best price.**

FingerLogin by employees

FingerLogin helps to save a lot of time every day as the FingerLogin is much faster than entering user name and password. And the employees can forget all their passwords in future. They will never need them again.

FingerLogin also saves a lot of money for the IT department of a bank as the administration of passwords normally requires many resources for the change of passwords, especially if they are forgotten or if they are due for renewal.

FingerLogin generates a **new level of security**. Studies have shown that in most cases passwords are written down on a paper and that they can often be found somewhere around the working place or given away to other persons, so that it could be difficult to trace who has really done a certain transaction. A finger cannot be given to any other person like a password. As such biometrics ensure that the right person is really present.

Another option of the system is that it can automatically log off the application if the user is not in front of the PC any more. This is done by the additional option of the FingerLogin using facial identification in connection with a webcam.

SECURITY fingerprint - encryption

- ✓ High security level of the data and unique access solely by the registered user
- ✓ Fast, simple and easy to use
- ✓ High quality and professional
- ✓ Offers the possibility of integrating the networks of the public administrations and companies
- ✓ No need for entering passwords and key words
- ✓ No stolen and forgotten passwords
- ✓ Application mobility of the whole system
- ✓ Fake finger detection

Benefits and features:

- ✓ Highly secure and reliable
- ✓ Increases the operational efficiency (for both, customers and retailers)
- ✓ Time savings
- ✓ Privacy rights are not infringed
- ✓ Highly attractive for wide range of customers
- ✓ Represents a great marketing benefit
- ✓ Increases customer retention
